3	H₂O Example	3

1 Introduction

This project aims to plot electron density as a “fog” rather than with isosurfaces using jasp. The code has been adapted from the examples in dft-book and the example given on http://docs.enthought.com/mayavi/mayavi/auto/example_chemistry.html. The mayavi documentation on volume rendering (<http://docs.enthought.com/mayavi/mayavi/mlab.htm#volumetric-scalar-data>) and the jasp documentation for plotting charge density (<https://github.com/jkitchin/jasp/blob/master/CHG.py>) have been used as reference. Examples of python code have been written for the CO and the H₂O molecule.

2 CO Example

```
1 from jasp import *
2 from enthought.mayavi import mlab
3 from ase.data import vdw_radii
4 from ase.data.colors import cpk_colors
5 from ase import Atom, Atoms
6
7
8 # creating atoms object
```

```

9  atoms = Atoms([Atom('C', [2.422, 0.0, 0.0]),
10                 Atom('O', [3.578, 0.0, 0.0])],
11               cell=(10,10,10))
12  atoms.center()
13
14  # running dft calculation
15  with jasp('molecules/co-fog',
16            encut=350,
17            xc='PBE',
18            atoms=atoms) as calc:
19      calc.calculate()
20      atoms = calc.get_atoms()
21      x, y, z, cd = calc.get_charge_density()
22
23  # making a black background
24  mlab.figure(bgcolor=(0, 0, 0))
25
26  # plotting the atoms as spheres,
27
28  for atom in atoms:
29      mlab.points3d(atom.x,
30                    atom.y,
31                    atom.z,
32                    scale_factor=vdw_radii[atom.number]/5.,
33                    resolution=20,
34                    # a tuple is required for the color
35                    color=tuple(cpk_colors[atom.number]),
36                    scale_mode='none')
37
38  # plotting the charge density
39  source = mlab.pipeline.scalar_field(x,y,z,cd)
40  min=cd.min()
41  max=cd.max()
42  # vmin and vmax were adjusted by iteration
43  vol = mlab.pipeline.volume(source, vmin=min+0.1*(max-min),
44                             vmax=max)
45
46  # view adjusted by iteration
47  mlab.view(azimuth=-90, elevation=90, distance='auto')
48
49  mlab.savefig('molecules/co-fog.png')
50  mlab.show()

```

3 H₂O Example

```

1  from jasp import *
2  from enthought.mayavi import mlab
3  from ase.data import vdw_radii
4  from ase.data.colors import cpk_colors
5  from ase import Atom, Atoms
6
7  # a similar approach to the one shown for the CO molecule has been taken
8
9  atoms = Atoms([Atom('H', [0.5960812, -0.7677068, 0.0000000]),
10                Atom('O', [0.0000000, 0.0000000, 0.0000000]),
11                Atom('H', [0.5960812, 0.7677068, 0.0000000])],
12               cell=(8, 8, 8))
13  atoms.center()
14
15
16  with jasp('molecules/water-fog',
17            encut=350,
18            xc='PBE',
19            atoms=atoms) as calc:
20      calc.calculate()
21      atoms = calc.get_atoms()
22      x, y, z, cd = calc.get_charge_density()
23
24
```

```

25 n1, n2, n3=cd.shape
26 mlab.figure(bgcolor=(0, 0, 0))
27
28
29 for atom in atoms:
30     mlab.points3d(atom.x,
31                   atom.y,
32                   atom.z,
33                   scale_factor=vdw_radii[atom.number]/5.,
34                   resolution=20,
35                   color=tuple(cpk_colors[atom.number]),
36                   scale_mode='none')
37
38
39 source = mlab.pipeline.scalar_field(x,y,z,cd)
40 min = cd.min()
41 max = cd.max()
42 vol = mlab.pipeline.volume(source, vmin=min+.1*(max-min),
43                             vmax=max)
44
45 mlab.savefig('molecules/water-fog.png')
46 mlab.show()

```
